Jinda Li

Software Developer

[Email](#)
[Portfolio](#)
[LinkedIn](#)

Versatile software developer with **extensive experience in Unity and Unreal Engine**, Proven expertise in performance optimization and PCG, delivering scalable solutions for complex real-time applications.

WORK EXPERIENCE

Unity Developer

Feb. 2024 - Mar. 2025

Mixed Reality, Microsoft

Research projects to deliver state-of-the-art products

- **Multi-Camera Rendering Optimization**: Architected a high-fidelity AR-in-VR simulation environment in Unity, handling 6~8 concurrent camera views on resource-limited HMD hardware. Optimized the pipeline to a **stable 40+ FPS by utilizing Unity Profiler/Frame Debugge**r to eliminate draw-call bottlenecks.
- **Asynchronous Procedural Systems**: Engineered a real-time procedural city generation system utilizing an improved Wave Function Collapse (WFC) algorithm. Decoupled heavy constraint-solving from the main thread using the **C# Job System and Burst Compiler**.

Unreal Developer

Sep. 2023 - Apr. 2024

AI-Driven Open World Game, Microfeel

Start-up company focusing on Generative AI and UGC in Games

- **LLM-Powered Procedural World**: Engineered a **semantic-to-geometry pipeline** using LLM to automate procedural world generation in Unreal, translating natural languages to deterministic UGC world.
- 3D Gaussian Splatting Demo: Pioneered the integration of 3DGS in Unity for interactions in realistic scenes.

Game Designer Intern

May. 2021 - Jul. 2021

Naraka: Bladepoint, NetEase Games

Action-adventure battle royale game, 180k concurrent steam players at peak

- **Animation Pipeline Optimization**: Served as the interface for integrating animation assets into the game engine. Optimized asset requirement standards to reduce integration errors between Art and Engineering.
- Movement Refinement: Refined trigger shapes to support seamless movement across large-scale combat zones.

PROJECT EXPERIENCE

A Cloud's Adventure Roles: Solo Developer

[[Link to Video](#)] Technical Implementation for an Interactive Cloud Avatar

- **Advanced Fluid & Particle Simulation:** Engineered a real-time interactive cloud system in **Unreal Engine** using GPU particles and custom Position-Based Dynamics (PBD**)** solver.
- **Volumetric Rendering:** Implemented ray-marched material from rasterized particle data, supporting fake multiple scattering and powder effect.
- **Performance Optimization**: Reduced computational cost by spatial partitioning to achieve 60 FPS on a laptop.

SKILLS

Unity
Unreal
C++/C#
HLSL
Shader
VR/AR
Python
Git / P4
Unity DOTS
CI / CD
OpenMP
Parallel Programming
Blender
Linux

EDUCATION

Game Design and Production, Aalto University
Master of Science 2021- 2025

Electrical Engineering, Southeast University (China)
Bachelor of Engineering 2016-2020
