Dear Visual Components Hiring Team,

I am writing to apply for the **Software Developer (Visualization)** position. **My name is Jinda Li, and I have over four years of experience developing 3D software.** You can view my full experience and projects on my [LinkedIn profile](#). **I have hands-on experience in 3D rendering, AI, graphics, visualization, VR/AR applications.**

Here is what I can bring:

- **Strong 3D and Rendering Background**

At Microsoft Mixed Reality, built Unity-based VR/AR simulators with **holographic rendering, eye-tracking, and gesture controls**. In my personal project, *A Cloud's Adventure*, implemented custom rendering (Unreal with C++ and HLSL) and particle-like behavior, optimizing from 2 FPS to smooth real-time rendering.

- **C++ and multi-language development**

Solid understanding of **modern C++** programming principles: standard containers, iterators, memory management, and object-oriented design. Also familiar with advanced features such as smart pointers or move semantics. As a **research assistant and course system developer of Programming Parallel Computers** at Aalto University, I had hands-on experience in writing high-performance C++ codes. Have over four **years' experience developing games with C#**. At Microfeel, extended Unreal Engine with **Python scripting** to build procedural generation systems.

- **Experience with Microsoft tools**

Delivered projects at my **previous position at Microsoft using Visual Studio, Windows**. Working in cross-platform AR/VR development. Applied **Git and version control** practices in team projects to manage codebases and ensure stability.

- **Communication and Collaboration**

I have worked closely with artists, marketing teams, and researchers in my game development and professional projects. I value clear communication, am receptive to receiving constructive feedback, and proactively provide feedback to improve workflows and solutions. I am **fluent in English**, both spoken and written, which allows me to collaborate effectively with international teams and across different disciplines to deliver high-quality results.

I would be glad to bring my skills in 3D development and system building to Visual Components and support your work in simulation and visualization.

Best regards,

Jinda Li
