Dear Next Games Team,

I'm excited to apply for the **QA Engineer** position at Next Games. I have **over four years of experience in game development with Unity and Unreal Engine**, and during that time I've gained a solid understanding of gameplay systems, graphics, and performance optimization. This experience has made me appreciate the importance of QA and how it ensures players have a smooth, enjoyable experience. I'm eager to bring my attention to detail, patience, and technical knowledge to a QA role.

In my previous work, I developed cross-platform VR applications at Microsoft, focusing on performance and workflow optimization. At Microfeel, I extended Unreal Engine with Python scripting, built procedural generation systems, and designed scalable architecture. I also led an independent project, A Cloud's Adventure, where I created a physics-based, particle-driven character, implemented custom collision handling, and optimized performance from 2 FPS to smooth gameplay on a laptop GPU. **These experiences give me insight into the challenges developers face and help me identify potential issues effectively.**

I am comfortable working with multiple teams, prioritizing tasks, and taking initiative to improve QA workflows. I am also interested in contributing to test automation and validating technical features to help maintain high-quality standards across projects.

You can view my work and projects on my [LinkedIn profile](#). I would love the opportunity to discuss how I could contribute to Next Games and help deliver polished, engaging mobile games.

Thank you for your time and consideration.

Best regards,
Jinda Li
