Dear Hiring Team,

I'm excited to apply for the **Graphics Engine Developer** position at Basemark. With hands-on AR development experience from Microsoft, a strong technical background from Aalto University, and a deep interest in real-time graphics, I'm confident I can contribute meaningfully to your benchmark and engine development work.

At **Microsoft's Mixed Reality department**, I worked on Unity-based AR-in-VR simulation tools and HoloLens 2 applications. These involved features from **custom rendering to eye tracking and spatial interaction**. Through this, I became comfortable working across hardware and software boundaries. And more importantly, collaborating with cross-functional teams to bring ideas into real, working prototypes.

In my personal and academic projects, I've pushed beyond using engines and into extending them. For my current game project A Cloud's Adventure, I've built an **interactable volumetric cloud** in Unreal using **particle simulation, position-based dynamics, and custom shaders**. I enjoy digging into rendering bottlenecks and find real satisfaction in solving them. For example, by optimizing particle counts and introducing a neighbor grid to reduce loop iterations, I was able to bring the game from 2 FPS up to smooth performance on a laptop GPU.

In a separate graphics study, I extended Nvidia's real-time framework to realized **Global Illumination with QMC sampling** and **BVH-based Raytraced Ambient Occlusion** (see more [Here](#)). This showcases my C++ graphics programming skills and hands-on experience with core rendering techniques.

I also have a lot of experience working closely with artists. That kind of collaboration is something I really enjoy, and it's a big part of why Basemark's team structure and culture appeal to me. Having graduated from Aalto University and explored both real-time rendering and engine internals, I'm passionate about pushing what's possible with modern graphics. I'm particularly excited about the future of AR navigation and automotive experiences, and I believe Basemark is in a unique position to shape that future through your proprietary engine and benchmark tools.

Thanks for considering my application. I'd be glad to chat further and learn more about what you're building.

Best regards,
Jinda Li
