Dear Zynga Hiring Team,

I am excited to apply for the Software Developer position at Zynga in Helsinki. I have **over four years of Unity development experience** with both team and personal projects. My work includes **gameplay logics, map editors, Unity plugins, AI chat boxes, VR and XR applications, as well as mobile performance optimization on Android**. Many of my projects aim to bring players a sense of emotional satisfaction, and I always develop features with the goal of enhancing the game experience. You can see many of my technical works, including graphics and game design, on my LinkedIn profile.

I also have professional experience at Microsoft, where I strengthened my collaborative skills and learned to write clean and maintainable code. Even in personal projects, I take coding standards seriously. I believe my combination of technical skills, teamwork experience, and focus on player experience makes me a good fit for Zynga.

I would love the chance to chat and share how I can contribute to your team. Thank you for your time and consideration.

Best regards

Jinda Li
