Dear Lightneer Team,

My name is Jinda Li, and I am a game developer with **over four years of experience in Unity and Unreal Engine, specializing in gameplay systems, real-time graphics, physics, and performance optimization**. I would like to politely ask whether there might be **any Programmer opportunities** at Lightneer Studios. I would be happy to provide more details about my experience and projects, and I would also be glad to stay in touch for any future openings that match my skills.

My experience includes:

- Microsoft – Unity Developer
Built cross-platform VR applications, with a strong focus on Android performance optimization. Created custom in-editor tools in C# to streamline workflows and developed shaders to enhance visuals while maintaining high performance on mobile devices.
- Microfeel (AI Startup) – Unreal Developer
Extended Unreal Engine with Python scripting to add AI features and built procedural generation systems for dynamic buildings. Focused on modular, scalable architecture suitable for online systems.
- Independent Project – A Cloud's Adventure
Leading development of a physics-based controllable cloud character in Unreal Engine using C++, Blueprints, and HLSL. Designed and implemented custom collision handling and interaction systems for a particle-based cloud avatar, similar in complexity to vehicle physics. Optimized performance from 2 FPS to smooth gameplay on a laptop GPU using a neighbor grid system and other techniques.
- NetEase Games – Game Designer Intern
During the open-beta stage of the highly successful title Naraka: Bladepoint, contributed to combat design, streamlined animation pipelines, optimized movement in complex combat environments, and helped design initial battle maps.

You can view my full experience and projects on my [LinkedIn profile](#). I would greatly appreciate the chance to discuss how I might contribute to Lightneer Studios' development of high-quality games.

Thank you very much for your time and consideration.

Best regards,

Jinda Li
